

## **MEMBER ALERT**

### **Water Resource**

Due to the recent KCRA news story: <https://www.google.com/amp/amp.kcra.com/article/here-s-what-s-in-the-water-at-your-child-s-northern-california-school/13534276>

Water in schools has emerged or re-emerged rather, as the hot topic. Please note that the water levels for our JPA member districts, as reported by KCRA, were within EPA guidelines.

If your district is interested in water testing, the State Water Resources Control Board has some information for schools and funding/grant program on their website.

You would have to determine if your district meets the eligibility requirements.
